### COMMENT CARD

*Please provide additional comments or concerns regarding the scope/content of the project below.*

Consider how you leverage the infrastructure being built to Mitigate excess material use (concrete, etc.) and generate revenue to off set maintenance costs. Diverting water for a multi-species processing plant would stimulate and bolster local economy as well as increase local food source independency.

What is Current  
Maintenance program for ditches & underground pipes ~ Scheduled  
current conditions ~ Increase capacity, improved

Agree with storage & management of flood  
waters, protecting infrastructure & housing areas,  
Don't agree with dams

### COMMENT CARD

Please provide additional comments or concerns regarding the scope/content of the project below.

- Willow creek flooding is an issue and concern.
- Explore options for micro and/or natural storage upstream and west of town (Beaver mimicry).
- Explore options for flood mitigation that do not divert water out of watershed or far from stream.
- Explore options for small scale energy generation.
- Explore options for stream restoration, riparian plant restoration.

### COMMENT CARD

Please provide additional comments or concerns regarding the scope/content of the project below.

I would like to see water brought into the Pikuni Walking Park so that the State Mitigated Wetland ~~is~~ for a variety of recreational uses there. Also, removing the existing wetland at Charging Home Stampede Park. More cleanliness awareness

### COMMENT CARD

Please provide additional comments or concerns regarding the scope/content of the project below.

Concern is to have a Plan that Diverts  
Water and if possible enhance Riparian & Wet  
land areas - create recreational uses for excess water

increase willow creek / by pass and  
Retention Ponds -
